Restylane Vital™  
Restoring skin vitality

Restylane Vital™ for radiant, healthy skin

For the first time, Restylane Vital™ offers the perfect way to embrace aesthetic treatments and combine with skin care creams to achieve radiant, healthy skin.

A Restylane Vital skin revitalisation programme can be used in its own right to improve skin quality and condition. But it also can be used as a final finishing touch to complement the treatment benefits of the entire Restylane range.

Typically, three Restylane Vital treatments are recommended for optimal results – with each treatment being given every fourth week, and maintenance treatments once or twice a year as needed.

*Skin vitality and lustre is restored  
Skin condition and quality is improved*

Remember to ask for Restylane Vital™ by name

Restylane Vital and Restylane Vital Light are trademarks owned by Q-Med AB

*Restylane Vital™ is a unique skin revitalising treatment that leaves skin looking and feeling smoother and more toned*

## Restylane Vital™ is proven to be effective

Restylane Vital is the skin revitalisation treatment that you simply cannot do without.

That's because Restylane Vital is a skin boosting treatment which nurtures the skin in a way that creams and other moisturisers simply cannot do.

Restylane Vital promotes the production of healthy skin by balancing the nutritional environment of the skin at cellular level by attracting and releasing water when needed. It boosts skin elasticity leaving it looking smoother and feeling firmer and more toned. Skin vitality and lustre is restored and skin condition is improved.

Before

After

*Restylane Vital combats the combined effects of ageing, such as unsightly, prominent veins and sun damage on the backs of hands.*

## Restylane Vital™ provides deep dermal hydration

The natural hydrating properties of Restylane Vital make it the obvious choice for skin areas that take on a dehydrated appearance with over exposure to the sun. These areas typically include the face and décolletage as well as the backs of hands.

## Restylane Vital™ Light for sensitive, thin skin

Whilst Restylane Vital is suited for photo damaged, crêpey skin, Restylane Vital Light is a new formulation specifically designed for use in more sensitive skin areas, such as crows feet, peri-oral area above the top lip and neck as well as the décolletage and backs of hands where skin can be thin.

Restylane Vital Light can be used in conjunction with all the Restylane® dermal fillers as a finishing treatment, or as a skin conditioning treatment in its own right; it is the ideal skin boosting treatment for those special occasions where you need to look your best.

Your medical aesthetics practitioner will discuss which Restylane Vital gel is the right one for you.

Before

After

*Restylane Vital re-texturises and improves skin elasticity where creams have failed to work*

## A skin revitalisation treatment you can trust

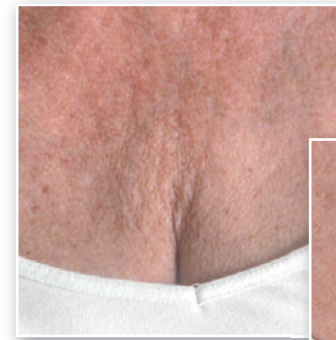

Like all Restylane products, Restylane Vital is derived entirely from a non-animal source. With a proven track record spanning over 12 years, and more than 10 million treatments worldwide, you can be assured of Restylane's enduring safety.

## Restylane Vital is clinically proven to be effective

A recent clinical study<sup>1</sup> demonstrates that Restylane Vital improves skin elasticity and decreases skin surface roughness. The result: smoother, firmer, toned, healthy looking skin with an overall revitalised appearance.
